• please forward to the Unit.

All,

In an effort to answer a FOIA request, I am requesting that all TICTU employees and contractors immediately do a word search of their e-mail system (active and archived records) for the term "DCS-3000" and "DCS 3000" and "DCS3000" (variations of the same term). If a document or e-mail is located print it and bring the hard copy to [redacted] for compilation.

I need this accomplished ASAP. If there is a negative response - I need that also.

DATE: 06-18-2007
CLASSIFIED BY 65179DMH/KSR/LMF

~~SECRET~~

This is the only email. [] contacted me by phone to give me the date of Wednesday afternoon, Sept 27, 2006 as a start time. b2 b6 b7C b7E

[] If Quantico will not fund the circuit (we will try that first), then Birmingham division will need a circuit installed from here to [] RA to push pen register data in real time to their DCS-3000 collection system. They will need real time data to send over to the [] classified system when they go up on their FISURs, which is pending. [] is going to check with Quantico as for as the required bandwidth.

[] can you request from TICTU a circuit for [] RA's DCS-3000 for pen register data for the [] system?

[] can you get with [] for the requirements to push the pen register data to the [] Does [] need to put in an RMS request?

SA []

Technical Advisor - Birmingham Division

Basically [] needs the order then they can give us the date we require.
I believe the data will come across the DCS 3000.
We have a connection to [] through the DCS 3000 on the FISA side [] floor).
I don't know how tough it will be to get it upstairs on the [] floor DCS 3000:

So -I would actually contact [] down at Quantico first.
Let them know we have a pen register order for [] for a criminal intercept.
Ask them to assist you in setting up the DCS 3000 for this.

b2
b6
b7C
b7E

While they are working on that I would contact [] to figure out how to get the order to them.
The contact number for [] according to the TICTU website). -
[]

Keep me posted on the progress and let me know if there is anything else I can do to assist.

Thank you,

b6

[REDACTED]

Overview/description of the CBT course is as follows:

The Telecommunications Intercept and Collection Technology Unit is pleased to announce the release of a computer-based training course entitled, "Switch Based Intercepts using DCS 3000." This training focuses on an FBI software application used to conduct CALEA based intercepts. The course is designed for Technically-Trained Agents and covers the installation, configuration and use of the DCS 3000 suite of applications. The instructional material is provided on a CD and the entire course is designed to be completed in approximately four (4) hours.

Since this courseware is now mandatory for students wanting to take enhanced classroom training provided by SBIT, we definitely need to meet to make sure we are all on the same page regarding us expanding our training. Currently, I provide the CBT as requested. Also, I'm not sure of all the logistics involved with having the CBT transferred over to the Virtual Academy and need your guidance in that area.

Greetings,

In an effort to improve the remote access/remote maintenance capabilities of the [redacted] system, the DCS-5000 Program Office wishes to get "Buy-in" from the field. We're currently evaluating software applications [redacted]. We would like to integrate the application software into the Windows boxes, such as: TIU, FAS, WinDB, and MW. The application would be controlled and it would be used primarily to assist and expedite troubleshooting. There are certainly other advantages for this application. It is used quite extensively on the DCS-3000 machines. If anybody has concerns or objections, then I want to hear from you. Please help me understand your objection. Feel free to call me, or send an email. Thanks for your continued support and cooperation. Hope all is well and thanks for your time.

Peace Out,

All,
I sent [redacted] at the USCG a copy of the DCS3000 install software. They are pursuing an intercept on a target and require the DCS 3000 software suite to accomplish this. She is being assisted by [redacted] of the DEA on networking issues. [redacted] has used the DCS with this carrier before and I hope will be assisting her in configuration since they are both out of Miami.

~~SECRET//NOFORN~~
RECORD 315

b6
b7C

[redacted]

Here are the CALEA numbers for 2006. There are multiple ways to present the information. The two I chose are: 1) new lines added in CY 2006, and 2) lines intercepted in CY 2006.

New Lines Added in CY 2006

[redacted]

b2
b7E

Lines Intercepted in CY 2006

[redacted]

b2
b7E

Note these numbers are for CALEA-enabled intercepts supported by the DCS-3000 system. The [redacted] numbers will completely overlap with the DCS-5000 numbers, and a portion of the criminal numbers will overlap with the DCS-6000 numbers.

[redacted]
I spoke with some of the guys who were using the DCS3000 during the case and got their input.

This case involved a drug related kidnapping which took place in [redacted]

[redacted] and whom received ransom demands. Over the next few days we obtained [redacted] cell phone numbers belonging to various Subjects from the group. We went up on Pen Registers on those as well. Initially we were not receiving the [redacted] data (as you know) but once that was corrected a large volume of data was received.

[redacted] This information was of great value in determining the whereabouts of the victim and the Subjects prior to the series of arrests which ultimately took place. The victim was located unharmed.

Thanks for all your help!

~~SECRET~~

Just wanted to take a moment and sincerely thank you guys for everything you do to assist us.

The recent DCS 3000 solution you provided that allowed us to get pen data to our [redacted] location and into the VoiceBox system has been invaluable. Instead of providing pen data for what was expected to be a short period of a few days, it continued to provide data to our Title IIIs for two weeks. The restore process failed when attempting to import data from the old version at Chelsea into the new version at the CMP. The problem was solved last week, but your equipment allowed us to have a manageable problem instead of a major headache.

b2
b7E

I hope we provide the kind of support to those we assist that you provide to us.

Thanks again,

From all of us at the New York CMP

Some field offices are saving the information to a directory on the machines C: drive and then using either the

[redacted]

creation methods to burn the target information onto disks. [redacted] is working on a "Tech Tips" best practices edition for how this is being done.

However, that said, we are investigating the use of the dreaded [redacted] There are many policies to consider in using this

type of media. [redacted] from New Haven is working on these issues. She is feeling out the potential hurdles we might face. The first

one she is looking at is taking a data storage device from an unclassified (DCS 3000 Cleint) to a classified [redacted]

[redacted] system.

She has found out that the [redacted] MUST have write protection capabilities and that write protection must be on before connecting the

drive to [redacted] This is so the Classified system can not write to the media, which makes sense. There are scanning for virus issues and othe

things that still need looking at. So, that is where we are at. Call me if you want a pre-edition of the Tech Tips from [redacted] or want to discuss this.

Also, there is the evidence issue. I have always been told "first removable media." I am not a lawyer however.

I think it best if someone from your office replies. [redacted] is asking if your office enables the [redacted] for each pen-register (criminal and FISA) target as a matter of policy/practice. The default on the DCS-3000 is not to allow the [redacted] after the call is setup unless the check box called [redacted] is checked for each target. I just checked your criminal DCS-3000 system, and the vast majority are set to [redacted] which means you're not collecting [redacted] just the [redacted] dialed at the beginning of the calls for the majority of your targets. I assume this is due to policy/practice in the office. If so, your response to [redacted] cases.

At the risk of sounding lazy, is it possible to have an auto-update feature that would allow the input of a target into the warrant database on one client that would then allow you to select other clients you would like to populate with this same data. For many different reasons, some good, some not so good, we are in a position where we have the same target in multiple clients and not all are always remembered to be update at renewals.

Just wanted to touch base with you on the Friday incident with the [redacted] numbers.
We got all four number is and they all downloaded.

703 [redacted] took the longest
703 [redacted] and 703 [redacted] were quick since the coverage for them began today
703 [redacted] was quick also. It only had call records for [redacted] I thought this one had call records back to March - Are we missing anything on this one??

Can you check your system and tell me if we have anything pending for the above numbers??

Thank you for your assistance and patience.

Hi guys,

I have a quick question about [redacted] This may be something you have long been aware of but, since I just started doing the uploads, I have not seen it before. On some outgoing local calls with [redacted] pens the raw data indicates a 011 was dialed before the number. As a result this number does not get uploaded to telephone apps. Instead the call is rejected as an error; "MISSING TO NUMBER." These are completed calls, with a duration. This is occurring with different targets on unrelated cases. All are outgoing calls from [redacted] phones to local numbers here in LA. I can't believe would be dialing 011 before they make a local call. Do you know why this is happening?

I don't know if you remember speaking to us or not regarding replacing our "front room" DCS 3000 machine. The one we are using now is attached to the CDNRS machine. We what to remove it from the CNDRS and start having the IAs downloading from the DCS 3000 instead of the CDNRS. The problem with the old machine is that it does not have a CD burner. Is it possible to send us a new DCS 3000 computer? Thanks.

Hey [redacted]

b2
b7E

I cannot ping the pix. So, what we need to check is:
are you looking at the correct pix? the one I show in the database is [redacted]
power? is the pix powered on
cables? the ethernet cable from e0 should be plugged into the same switch as the dcs-3000, if so, unplug and replug from both ends
(S) connection lights? did the lights on the ethernet port come on when you plugged the cable back in
if no connection lights, then try a different cable
ping working now? try pinging from a command prompt on the dcs-3000, type: ping [redacted]
if no response, try rebooting the pix

hopefully one of these steps will fix it, otherwise the vb guys may need to send you a new pix.
I'll be in until 4:30 or so today if you want to give me a call this afternoon.

b1

thanks!

[redacted]
Not sure if I am contacting the right person, if not, redirect my email. See below info sent to [redacted] ref the DCS3000. As mentioned, we are setting up a pen on a [redacted] phone, CDC going through the DCS3000 to the [redacted]. We also want the CDC info going to [redacted] as this will eventually become a TIII. DCS3000 is set up and receiving the CDC on the line but it is not going to VB. We cannot ping it from VB. JSI believes there is a connection issue with the DCS3000. Don't know enough of the DCS3000 etc. to do much good.

Can you provide us with info to trouble shoot? Checked the Pix [redacted] had a yellow cat 5 out of the Ethernet0 (yellow) port to the 3 Com Switch) as [redacted] wanted me to check. Set up between the Pix and switch is same, has not changed from original setup years ago.

Thanks

I cannot ping the outside [redacted] DCSnet side) of the firewall. Check the cables on the PIX: the outside (Ethernet0 shown in Yellow) should have a CAT-5 cable connected to the [redacted] switch (the switch the DCS-3000 and routers are connected).

Have been setting up a pen register for a [redacted] line in [redacted] vs. [redacted] and in the DCS3000. Appears to be working in the DCS3000 but for some reason VB does not have access to the DCS3000. JSI suspects the [redacted] firewall is not allowing VB access to the DCS3000. [redacted] shows [redacted] down [redacted] input status is shown as Unknown. Cannot ping [redacted] from VB; had restarted [redacted] to no avail. Never had this problem previously, only since we have upgraded [redacted] earlier this year. As far as I know no, IP addresses have not changed. Any guidance on how to work this is appreciated.

Target line is 808 [redacted] Surv ID is [redacted] if this helps.

I don't know if you remember speaking to us or not regarding replacing our "front room" DCS 3000 machine. The one we are using now is attached to the CDNRS machine. We want to remove it from the CDNRS and start having the IAs downloading from the DCS 3000 instead of the CDNRS. The problem with the old machine is that it does not have a CD burner. Is it possible to send us a new DCS 3000 computer? Thanks.

Press enter to go to the next screen where you can enter a date range, if you want to. This will submit the report.

Yes it has been quite a while since we met and I think that it would be a good idea to meet again. We have some people out on vacation for the next 2 weeks, but should be able to meet after that. Does that work for you? Do you have some ideas of what you would like to discuss?

Subject: Statistics on Pens

~~SENSITIVE BUT UNCLASSIFIED~~
~~NON-RECORD~~

I have an inquiry about statistics for pen uploads. TICTU is asked frequently how many intercepts we are supporting. Since we provide capabilities and equipment but don't actually perform the intercepts, this is a request which is very difficult for us to get. However, in thinking about this it occurs to me that our unit does support the field with equipment for all the pen uploads from the [redacted] and the DCS 3000 sources. My

question is whether a statistic for how many unique target phone numbers from our unit's supported systems [redacted] that are input into TA can be obtained? At this point this is an informal fact finding request.

It has been a long time since we all met and given the fast moving nature of telecommunications I think we all need to have another meeting. Let me know what you think about this.

Thanks,

Hi [redacted]

Sorry to keep bothering you. [redacted] had set up a CALEA T-1 intercept with [redacted] for one line. [redacted] advised that because it was a [redacted] switch, the CDC could only be sent on an [redacted] went ahead and had an [redacted] terminate in a City of [redacted] office within distance of the CO. I asked the case agent if the pen was critical in his investigation and he related that he would already know who was being called and mainly wanted the CCC, so the CDC went to cyberspace. [redacted] has since put four other targets on the same T-1, but that agent needs the CDC.

I'm told that the office area the [redacted] terminates is in a secure space, but I haven't seen it. [redacted] hasn't seen it either. If we can confirm that it's under the control of the City of [redacted] would we be able to put a router there to connect up to us here in [redacted]. The plan would be to build a [redacted] circuit to our co-location in San Francisco then to [redacted] ver [redacted]

Let me know your thoughts and if it's okay, what I'll need to RMS.

Do you want me to send an RMS requesting the new DCS3000 for [redacted]

[redacted]
I connected an ethernet cable from the [redacted] to the DCS3000 switch [redacted]. The [redacted] port was taped on the [redacted] so I assumed it was not to be used. Hope this is correct.

On Wednesday we will get two b1 lines in our office. Do I connect the lines to one of the 4 ports on the top right, back side of the [redacted] using the black splitter connector cables provided with the [redacted]? I am usually in by 6:30-6:45 am HST or 12:30-12:45 pm your time. Send me an email or call if the the set up is not correct.

We would like to test the lines from [redacted] if possible on Thursday as it will be Friday, [redacted] time. If we do it about 11:00 am HST, it will be 5 pm your time and 7:00 am [redacted] time, Friday. Can you stay till that time or later, to see if it works and make any adjustments as needed? We will get back with you once we coordinate the [redacted] telephone point of contact.

Thanks

Hi [REDACTED]

(S) Everyday the DCS3000 [REDACTED] keeps opening up a error box with the message "Client - Cannot determine the device type from the given filename extension". It will some times be displayed 20 times. I close all the messages and they reappear later. I've tried a reboot of the system, but the message keeps coming back. Can you take a look when you get a chance or give me a call to explain what it's trying to open?

~~SECRET~~

~~SECRET~~

I'm in the process of trying to get a new motherboard, processor, and RAM to upgrade the DCS here. Whenever [redacted] tries to burn copies of large end of pen reports to CD, the DCS says it's running out of memory and crashes. Is this the correct direction to go? It doesn't happen if they're small files.

The case agent inquiring about the 800 no. pen never got back to me, so I don't know what the status is.

b6

[redacted]

Some of this information is third hand so it might be a little distorted.

This is what I was told:

[redacted] contacted [redacted] stating a line was running open [redacted] stated it was for [redacted] tracked it to a modem that was not working properly. The modem is dialing out, can't connect, hanging up and redialing. This has been occurring for a week now.

This is my research:

I looked at this modem. It is modem number # 6. It is connected to port# 5 on the [redacted] series machine with [redacted]

(S) According to our records Norfolk was calling this modem to connect to the DCS 3000 system. If this has changed then I am not aware of this.

Based on the above I looked into the multiserver and could not find a switch for [redacted] on the [redacted] machine.

(S) I looked on the [redacted] multiserver and found the [redacted] switch but it was not checked.

b1
b2
b6
b7C
b7E

I hooked a [redacted] to the modem and determined the number being dialed is 202 [redacted] --- Do you know what this is?? I don't.

I searched this in our database and came up with nothing which probably means that we did not order this line.

Can you look into this and determine what this modem was being used for? Is it still needed? Can we power it off??

Thank you for your help.

I just wanted to check with you to see if we're following the correct procedure when making an Original Disk for the Case Agent.
We've been making a Disk from the DCS3000 with the CDNRS, Summary and Log files and marking it as Evidence, and sending it to the Case Agent. [redacted] has then been having us delete it from the DCS to help clean out the system. My question is.....Should we be deleting the records totally from the DCS? Are we supposed to make a hard copy as well upon end of the case? Are we handling this the same as the other offices?
We have an issue that came up today, that the Case Agent say's one of his Evidence Disks is corrupt and he wants us to provide him with another Original. Well, needless to say.....it's gone.

I need some sample configs from your routers (with the community strings, passwords etc stripped). Also, if you have an updated network diagram please send that as well.

I would like to scan a DCS3000 system, if only to ascertain the possible consequences of scanning DCS3000 network. Do you have a system ready to go? This will probably be the last time ESOC will assist in FISMA compliance testing. After this, the ISSO's will be responsible for annual scans of systems.

Thanks

[redacted]
ESOC Test team

Hi [redacted]

If you've done something thanks, otherwise disregard. It appears I was getting no pen on one line, but the other four have pen from 5/5/06.

But, not to let you get off too fast. Where do I go to get some info to do a pen on an 800 number that rides on a hardline of [redacted]

Hi [redacted]

I've attached photos of our rack holding the DCS3000 router and routers used for the collection of the CDC from [redacted] delivery. When you initially set it up with [redacted] ports 1 and 3 were used on the [redacted]. Currently [redacted] is sending another target from another switch on port 2, which we're not getting anything on.

b2
b6
b7C
b7E

On the back of the [redacted] are six [redacted] cards that have 4 ports each, ie., x.1, x.2, x.3, and x.4. Port 1 of the first card is plugged into one of the two [redacted]. Port 3 of the first card is plugged into one of the two [redacted]. These appear to be working fine. I << [redacted] >> << File: [redacted] >> << File: [redacted] >> mistakenly thought that for every different switch we were getting the [redacted] CDC from we would need a separate router. [redacted] pointed out that it would only need a new port. [redacted] says all is functioning properly on their end for sending the CDC on the new target, on port 2. Port 2 is currently plugged into the other [redacted] on router [redacted]. Is there further configuration needed on our end for [redacted] port 2 to collect the CDC?

I tried plugging port 2 from the [redacted] in the new router you sent [redacted], but didn't collect anything. Any enlightenment you can provide will be greatly appreciated. [redacted] 925 [redacted] Thanks!

[redacted]

As you are probably aware, the [redacted] systems around the Bu are being isolated in SCIFs per Security Div. requirements. Here in KC we placed the T III voicebox system in the former FISA room, (no windows) and the SCIF with the [redacted] is now in the big room with windows which is acceptable to SecD for a SCIF. I can't figure that one out but they don't pay me to think about these things. Our SCIF has not been officially closed off yet but will be soon, and the criminal Agents, analysts, etc may not have access to it depending on their clearance level. They do need access to the 3000 from time to time.

Question; are we planning to have two DCS 3000 in each office to separate the FISA from the criminal? I am sure that will be an issue soon.

Thanks,

b6

All,

Upon completion of your PIA and it's approval by you SC, please forward me an electronic copy no later than 10:00 AM Friday, 6/9/06. I will then forward OTD's submission to OGC by COB Friday, 6/9/06 in order to meet the OGC's deadline of "NLT" Friday, 6/9/06." Please ensure that the descriptions of your system are written in such a way as to ensure that a reader with no knowledge of what your unit and/or what OTD does can clearly understands, based solely on your description, what your system's purpose is and/or what it does.

In addition, our next deadline is Wednesday, 6/21 regarding the PIA short form for your system. Upon completion of your PIA and it's approval by your SC, please forward me an electronic copy no later than COB Tuesday, 6/20. I will forward OTD's submission to OGC by COB, Wednesday, 6/21 in order to meet OGC's deadline of "NLT Wednesday, 6/21.

Thanks for your assistance regarding these short deadline matters.

Discussed installation date of VoiceBox equipment and initial test. Begin on Monday July 10th.

Desired location is [] RA with [] RA as a second possible location.

Circuits would need to be operational before this time. Chicago may work with our DCS3000 lab in acquiring circuits if desired.

I believe that you informed me that Chicago does not have a circuit to the [] RA at this time but may still have one for the [] RA.

I was also informed that Chicago would pay for the circuit to each location. The desired circuit for each would be a full T1.

You had mentioned that the circuits would be temporary and only for the operation of the specified case that the office will work. With the remote setup the circuit would need to remain up as long as case review was needed at the RA or the case could be processed at the Chicago FO once monitoring was over and a circuit discontinued.

Will Chicago be able to supply the AWS workstations from the FO to the remote sites for this test?

I believe we had mentioned 4 AWSs for the remote site. ERF would also add a remote site repository machine with CDR capability and a printer.

Looking forward to your response.

Subject: New York CMP Thanks You -- Again

~~SENSITIVE BUT UNCLASSIFIED~~
NON-RECORD

Just wanted to take a moment and sincerely thank you guys for everything you do to assist us.

The recent DCS 3000 solution you provided that allowed us to get pen data to our [REDACTED] location and into the VoiceBox system has been invaluable. Instead of providing pen data for what was expected to be a short period of a few days, it continued to provide data to our Title IIIs for two weeks. The restore process failed when attempting to import data from the old version at [REDACTED] into the new version at the CMP. The problem was solved last week, but your equipment allowed us to have a manageable problem instead of a major headache.

b2
b7E

I hope we provide the kind of support to those we assist that you provide to us.

Thanks again,

From all of us at the New York CMP

Thanks [REDACTED] I would prefer just one machine but I am sure SecDiv at some point is going to force this on us anyway. [REDACTED] pls call or email so we can discuss, I am guessing we will need a second circuit to St. Louis?

As an aside, the SCIF thing is getting out of control in the field. Three Squads are now SCIFs and they have to turn on flashing red lights when a non SCIF'd person enters, including Agents and other FBI folks. I was told that the other day the flashing red lights were on all day. Also when our [redacted] area is officially blessed and activated as a SCIF, [redacted] BAE man will not be able to get to his desk. They pulled his SCI clearance when he retired and now trying to

~~SECRET~~

~~SECRET~~

get them renewed. Is SecDiv doing things like this back there?

Yes, we can provide a separate system for each. This is a preferred way for us in some respects. It means twice as many machines to upgrade and keep track of but, it allows for isolation of the targets for trouble shooting and the like. [redacted]

[redacted] is our deployment coordinator for the group. If you can give him a call or e-mail he can work out what kind of machines to send you.

[redacted]

As you are probably aware, the [redacted] systems around the Bu are being isolated in SCIFs per Security Div. requirements. Here in KC we placed the T III voicebox system in the former FISA room, (no windows) and the SCIF with the [redacted] is now in the big room with windows which is acceptable to SecD for a SCIF. I can't figure that one out but they don't pay me to think about these things. Our SCIF has not been officially closed off yet but will be soon, and the criminal Agents, analysts, etc may not have access to it depending on their clearance level. They do need access to the 3000 from time to time.

Question; are we planning to have two DCS 3000 in each office to separate the FISA from the criminal? I am sure that will be an issue soon.

Thanks,

[redacted]

[redacted] here is what I have so far for Chicago to be a test site for remote [redacted] we will need to move quickly for completion by the date we discussed earlier.

b2
b6
b7C
b7E

Discussed installation date of [redacted] equipment and initial test. Begin on Monday July 10th.

Desired location is [redacted] RA with [redacted] RA as a second possible location.

Circuits would need to be operational before this time. Chicago may work with our DCS3000 lab in acquiring circuits if desired.

I believe that you informed me that Chicago does not have a circuit to the [redacted] RA at this time but may still have one for the [redacted] RA.

I was also informed that Chicago would pay for the circuit to each location. The desired circuit for each would be a full T1.

~~SECRET~~

~~SECRET~~

You had mentioned that the circuits would be temporary and only for the operation of the specified case that the office will work. With the remote setup the circuit would need to remain up as long as case review was needed at the RA or the case could be processed at the Chicago FO once monitoring was over and a circuit discontinued.

Will Chicago be able to supply the AWS workstations from the FO to the remote sites for this test?

I believe we had mentioned 4 AWSs for the remote site. ERF would also add a remote site repository machine with CDR capability and a printer.

Looking forward to your response.

There is a DCS Backup directory that is a copy of everything you saved. Are you deleting that too? I have attached some thoughts on this issue that [redacted] wrote up. Each office seems to have a different view on how to handle the saves. Read this over and let me know if it helps. We are still working on incorporating some of [redacted] requests. It is a slow process.

I just wanted to check with you to see if we're following the correct procedure when making an Original Disk for the Case Agent.

We've been making a Disk from the DCS3000 with the CDNRS, Summary and Log files and marking it as Evidence, and sending it to the Case Agent. [REDACTED] has then been having us delete it from the DCS to help clean out the system.

My question is.....Should we be deleting the records totally from the DCS? Are we supposed to make a hard copy as well upon end of the case? Are we handling this the same as the other offices?

We have an issue that came up today, that the Case Agent say's one of his Evidence Disks is corrupt and he wants us to provide him with another Original. Well, needless to say.....it's gone.

Any help would be appreciated

Hey [redacted]

Here is the list of F numbers for the 2003 server licenses.

1. Names of person(s) that will utilize these licenses (if known - if systems will be used randomly by various personnel, then just state as such).
Various tech agents in the Field

2. State whether licenses are for FBI Employee or Contractor use (breakdown the quantities if necessary).
FBI Employee

3. List the Property Number of each computer system that license will be used on.

SBITSERVERHIGHB
AY.xls (18 KB)

4. State whether computer system(s) is a server, desktop or notebook
Server

5. State the enclave, Program and/or network that the system is connected to [such as FBINET, SBUNET (formerly Internet Cafe), SCION, Standalone, etc.], along with the system classification
Unclass DCSNET

6. Provide a justification that identifies the business requirements for the software
DCS-3000 systems

7. Provide the name of the approving official, title (at FBIHQ, must be Unit Chief or higher; for Field Offices, must be the SITS or Lead ITS), and the Unit/Section/Division.
UC [redacted]

thanks!

Are you looking for Windows Server standard or enterprise - and are those the only Microsoft products that you require? To save you some steps []

[] Note that these costs decrease by around 15% or so after June 15 (so if you are deploying after June 15th, you would probably want to be paying in our next anniversary cycle of the ELA).

Also, as a side note, is this project on the FBI's list of major projects, which is required by the CIO and FBI executive management?

Hey [redacted]

If you decide to move any workstations before you move your servers and routers, then you will need to change the ip information in them to get them to work at the new building. You can use the following addresses at the new building as soon as we get your circuit working:

(S)

b1

b1
b2
b7E

For your circuits, your main connections seem to be on the [redacted] router [redacted] There is a [redacted] and several dial ups or lease lines.

(S)

The [redacted] has a [redacted]

The [redacted] could be moved separately from everything else. It would be best if the [redacted] and all of its connections were moved at the same time as your DCS-3000 servers.

If you want to leave machines at the old building after the servers move, you can give them ips in this range:

(S)

b1

thanks!

Subject: Chicago DCS IP plan

UNCLASSIFIED
NON-RECORD

Hi all,

There has been a slight change to the IP address plan for the Chicago move. We have temporarily allocated a new block of IPs to the old building and a new block to the new building. Here is the list of events that need to happen:

- (S) 1. Add new block of IPs to old building [redacted] 7th RA)
this has already been done with the main router set for [redacted] use this as the gw)

b1

~~SECRET~~

~~SECRET~~

- 2.a. Change the IPs for the portable VB at the old building to use the [] RA scheme.
- b. Change the RW one way push boxes at the old building to use the [] RA scheme.

b1

(S) 3. Install new circuit to new building with ip addresses of [] RA)
router will be installed with ip address [] (use this as the gw)

- 4.a. VB at new building should be setup to use IPs for [] RA scheme
- b. [] one way push boxes at new building should be setup for 8th RA scheme

5. When Chicago is ready, move DCS-3000 machines and main FO IPs to the new building. No ip changes will need to be made to these machines.

b2
b6
b7C
b7E

- 6.a. Change VB IPs at new building to main FO IP scheme.
- b. Change [] one way push IPs to main FO IP scheme.

*** note, the above step is optional, but recommended ***

7. When service at old building no longer needed, shut down circuit.

Going with this plan will make the transition much more simple. The drawbacks are having to change the VB and [] IP addresses after the systems are up and running, or, if we skip step 6, then the waste of a block of IPs.

If anyone has any questions about this, please give me a call.
thanks!

b7E

~~UNCLASSIFIED~~
~~NON-RECORD~~

[redacted]

Before I forget to address this (as it is of low priority), I spoke with [redacted] last week about an UPS which has failed twice since being installed with the "new" DCS-3000 rack/equipment. It was significant last week because it was the primary power source for two routers (DCSnet and other Atlanta DCS router) and our secondary pix. I don't think the UPS had an F#, but I have a serial number for you....it is [redacted]. The control panel on this unit has always (since removing it from its original packing) looked wrong - i.e., the buttons were excessively recessed. [redacted] MIGHT remember this from the Atlanta install. Bottom line....if this is under warranty, we should look at having it fixed. If not, I think we need to surplus this one and consider a new one.

At your convenience, please get in touch with me about this.

Thanks,

Hey. How are things?

I was talking to [redacted] today and she told me they were given a pen register request. It turns out the line was ported out to [redacted]. She talked to [redacted] and they told her they could only give us the incoming calls. We were told the outgoing calls could be received from [redacted]. A call to [redacted] revealed that they do not have a CALEA solution yet but they are currently working on it. They did tell us they could give us [redacted] (CDR).

A couple of questions -

Do you have any recommendations for [redacted]?
Do you know if/how other offices have handled this?

I noticed you don't have a contact for [redacted] on the TICTU website and was not sure if you had one. This is the number that [redacted] called: 732 [redacted] and spoke to [redacted] (the spelling might be off). I hope this might help you.

DCS question -

I looked through the manuals for the DCS 3000 and could not find anything for the [redacted] client. I am sure you have shown me in the past how to use it but I can't figure out how to put the number in the [redacted] client. Can you give me some instruction on this? You can email it to me or if you want you can call and leave me a message 202-[redacted]

Hey [redacted]

I talked with the guys here about funding the [redacted] circuit and we have concluded that we just don't have the budget for it this year. We have asked for a budget enhancement from HQ, so, if we get it, we may be able to fund it next year. The only way we know of to fund that circuit is going to be through case funds. I would figure that building the circuit to Chicago is going to be cheaper than building to Indy.

When you are ready to build your circuit, please let us know so we can prepare the routers.

b2
b7E

Due to the relocation of the Chicago Field Division, Indianapolis must establish a new T1 connection between Indy and [redacted] to support the DCS3000 and [redacted]. This connection is mandatory to allow [redacted] to receive central pen register data from the DCS3000 through Indy's connection to Quantico. Without the connection you cannot effectively run a Title III in the [redacted] office. Below is a summary of the costs association with the connection.

One Time Installation Fee (Indy to MERA) [redacted]
Monthly Service Charge [redacted]

b6
b7C

Ultimately this monthly charge is not significantly higher than our previous connection to the Chicago Office. We are checking with the Engineering Research Facility (ERF) to see if they will pick up the cost. They already pay for our connection to Quantico and advised in the past all additional connections had to be paid by the Field Division. It cannot hurt to ask again.

Hey [redacted]

Yes, please order the replacement circuits. The [redacted] circuit is shared with the rest of the field, but I'm not sure who all is using the other one. Either way, though, we don't currently have the budget to take over those circuits.

thanks!

[redacted]
The cost of the hardware, software, and the development work for the interface to the Trilogy network or other FBI IT infrastructure for the DCS-3000 system is approximately [redacted]. The majority of this cost is for hardware (e.g. routers and other networking equipment). The DCSnet costs are approximately [redacted] if you include the IP service contract we have with [redacted] can elaborate on this topic if needed.

To All,

Due to the move, please provide [redacted] with all submissions no later than 3pm today. [redacted] and I will gather the data to send it to the front office later this afternoon.

[redacted] the DCS-6000 does not connect to trilogy, operate remotely over an IT system, or prepares data to be sent over an IT system. But, how it relates to DCS-NET may be a different story. So as not to duplicate numbers, if there is an IT cost for the 6000 and DCS-NET, can you include that number (and notation) with your estimate? Thanks.

Marcus Thomas has asked that we determine the cost of the IT portions of the OTD collection systems listed on the OCIO master list of systems, applications, databases, and networks. For the systems/projects listed below, please determine or estimate as best you can the cost of the hardware, software, and the development work for the interface to the Trilogy network or other FBI IT infrastructure. This will help us separate the funding of National Security Systems that are not truly IT from IT systems, databases, applications and networks. Please provide an estimate by Friday 3/24.

RECORD 315

Hey fellas,

I'm not certain if it was [redacted] or you fellas but thanks for fixing the VOIP collection for 718 [redacted]. Can someone look at (917) [redacted]? This number was instituted a few weeks ago but no pen data comes up. The audio looks OK.

Also, SO-1 has been instructed to begin uploading FISA pen register reports from Counterterrorism targets into the Bureau's Telephone Application database as standard practice. Unfortunately, the FISA pen records are separated by dashes as a delimiter. The pen reports on the criminal side, which have been uploading on a regular daily basis, use commas. Can you fellas change the interface at ERF to send the FISA pen data with commas instead?

Looking forward to seeing you fellas again when you install the equipment for the DCS3000 push into [redacted]

Hi,

[redacted] in addition to this problem, now if there is a first call with no CDC message and it hangs up, then when a second call comes in with audio, while this call is going on, if the CDC for the first call comes in it either minimizes the current call or takes over the current call (giving us the white bar) causing the audio on the second call to be lost. Is it possible this audio is still on the system and if so can it be retrieved. Can you please look into this. [redacted] advised that they took the number out of their system and put it back in. We are having them check this again, for the problem is still not corrected. Can you please look into this again. I will forward you the another e-mail with these calls listed from the case agent.

b2
b6
b7C
b7E

There is a current Title III up on a [redacted] telephone number. We are receiving the CCC fine. The CDC is not being received at the time of the CCC at the [redacted] and DCS3000. It has been witnessed of taking more than 5 minutes to receive the CDC.

If the call is long then the CDC attaches itself to the CCC and their appears to be no problems.

Hey [redacted]

I've left a message for [redacted] at [redacted] to talk with him about the channel bank. On their website, they show a card with a V.35 or RS-232 interface that would probably better suit our network. Hopefully [redacted] will call me back soon and we can discuss pricing. Depending on the cost, TICTU may be able to get the cards. Do you know if there are open slots for another card in the Seattle-Spokane channel banks? We would still like to test the system in the lab with the current configuration in case the serial cards are cost prohibitive. The address here at ERF is Building 27958-A, Quantico, VA 22135.

thanks!

[redacted]

We have tracked down the purchase request of the channel banks for the [redacted] link. The delivery of these to the Sacramento field office is on hold. I understand that you would like for them to be delivered to you at ERF for testing of DCS-3000 traffic utilizing these CB's. If that is the case please reply with the address to where you would need them sent. (That is, of course, unless someone else says to not do this.)

b2
b7E

After speaking with some of our folks about the transfer of the DCS-3000 data via the T-1 links (for both the [redacted] es), I am moderately confident that the [redacted] with the CB's, will support the need to send your system's data between the sites. If another card is required to support this effort we will need the model and (as always) someone will have to fund it.

Thanks.

I understand that you would like for them to be delivered to you at ERF for testing of DCS-3000 traffic utilizing these CB's. If that is the case please reply with the address to where you would need them sent. (That is, of course, unless someone else says to not do this.)

b2
b7E

After speaking with some of our folks about the transfer of the DCS-3000 data via the T-1 links (for both the [redacted] sites), I am moderately confident that the [redacted] with the CB's, will support the need to send your system's data between the sites. If another card is required to support this effort we will need the model and (as always) someone will have to fund it.

Thanks.

Hey [redacted]

I've left a message for [redacted] at [redacted] to talk with him about the channel bank. On their website, they show a card with a V.35 or RS-232 interface that would probably better suit our network. Hopefully [redacted] will call me back soon and we can discuss pricing. Depending on the cost, TICTU may be able to get the cards. Do you know if there are open slots for another card in the [redacted] channel banks?

We would still like to test the system in the lab with the current configuration in case the serial cards are cost prohibitive. The address here at ERF is Building 27958-A, Quantico, VA 22135.

thanks!

Subject: [redacted] Problem

b2
b7E

~~SENSITIVE BUT UNCLASSIFIED~~
~~NON-RECORD~~

b6
b7C

b2
b7E

[redacted]
We have identified a problem significant problem with the [redacted] switch: misrepresentation/misinterpretation of CallingPartyIdentity for incoming calls.

Background:

The Phoenix division is currently active on [redacted] PCS Title III intercepts (Target A and Target B). Recently, Target A called Target B and the monitor and case agent noted the calling party id presented in the Target B Termination Attempt message was not Target A's directory number. After interviewing the subscriber of the intercepted calling party id (another [redacted] PCS customer) and determining no [redacted] between this subscriber and Target A or B, the Phoenix division contacted me yesterday to report the problem and ask for an explanation. [redacted] and I examined the [redacted] messaging for the specific call and initially had no plausible explanation.

b2
b6
b7C
b7E

Analysis:

Last night, I decided to examine the ensemble of intercepted messages for all [redacted] targets for the month of February. I compared the calling party id in the [redacted] messages for each intercepted incoming call. I found that nearly 12% of all incoming calls to [redacted] targets and 4% of all incoming calls to [redacted] targets had different calling party ids in the [redacted] messages. This phenomenon only occurred for incoming calls served by [redacted] switches and not by any [redacted] switches. From the analysis of the PX call data, we assume the calling party id in the [redacted] message is correct when it is available (if the calling party blocks their caller id the number is not available in the [redacted] message). The results suggest the [redacted] switch is incorrectly populating the calling party id field in the Termination Attempt. I sampled and analyzed several of the bad messages and have noticed the problem only occurs when the [redacted] of the incoming calling party is presented in the Termination Attempt. My guess is the problem is due to the practice of number pooling where the [redacted] and directory number (DN) assigned to a mobile subscriber do not match. It appears the [redacted] switch is only populating the calling party id field with the [redacted] when the calling party is another [redacted] subscriber. This is a problem that cannot be remedied on our collection equipment (DCS-3000, DCS-6000, and DCS-5000) because the calling party DN is not always available in the [redacted] message (e.g., blocked caller id); thus, we have to rely on the caller id in the Termination Attempt message. More importantly, it's a problem for all of law enforcement who may be executing their cases using bad trap/trace information.

b2
b7E

I recommend OTD notify all divisions about the problem, and I suggest we seek immediate assistance from [redacted] I am available any time to further discuss this problem.

[REDACTED]

The procedures for FBI technical personnel who testify as subject matter experts within the FBI's TIP are the same as those that apply to other FBI witnesses, including adherence to the dictates of 28 C.F.R. § 16.21 et seq. Any legal or procedural questions should be promptly brought to the attention of the appropriate Assistant United States Attorney (AUSA) and the appropriate field office CDC or to an attorney in the Technology Law Unit, Office of the General Counsel, FBIHQ.

m) Evidence Acquisition/Recordation/Handling:

As noted, above, in the past, there was little prospect of FISA ELSUR information ever being used in court or other public venues. However, based upon recent rulings of the Foreign Intelligence Surveillance Court (FISC) and new interpretations of the FISA law and its purposes by the Department of Justice, it is now conceivable that FISA-based ELSUR information could be used as "evidence" in criminal cases or otherwise made public.

• **Evidence Acquisition:** FISA ELSUR equipment, techniques, systems, and platforms acquire/ intercept communications "content." FISA equipment used in local loop interceptions typically captures analog audio tones/signaling that is captured as "content." Under CALEA, which is carrier and principally switch-based, telephony content is referred to as call content and is transmitted over a [REDACTED] (CCC)." Details as to the elements/format of CALEA-compliant call content in wireline and wireless networks are set forth in the [REDACTED]. The interface for collecting FISA call content may be platforms such as the CALEA-related DCS-3000 platform and/or the DCS-5000 [REDACTED] platform.

• **Evidence Recordation:** Once ELSUR information is acquired, the signaling information should be recorded electronically as the "original evidence." Electronic recordation can be accomplished through recorders attached to the above-mentioned platforms.

• **Evidence Handling:**

If TTAs handle FISA ELSUR material, they run the risk of becoming part of the "chain of custody" for the ELSUR evidence, thus exposing themselves to the possibility of having to testify (contrary to FBI policy). Hence, TTA involvement in evidence handling must be avoided.

For information regarding evidentiary matters arising from intercepting "oral" communications pursuant to FISA, see "**Consensual Monitoring**," below.
